### Lab 01 : Installing Quartus Prime Lite & Access to

1. Download and install Quartus Prime Lite v20.1. See the link in the *Tools for Remote Work* section for details.
2. Download and install git. See the link in the GitHub section of *Tools for Remote Work* section for details.
3. Clone or download the Zip file for the GitHub repository: <https://github.com/kootsoop/CET466-Digital-Logic>
4. Start Quartus and open the VGA.qpf file in Examples/TestModule in the repository.
5. Compile the project and upload a screenshot here, showing that it compiled successfully. Below is an example; be sure to include the "Tasks" window with all green ticks.
6. Launch the CCSU apps website, and start the Engineering, Science, Technology Desktop. Start MultiSim 14.2.
7. Take a screenshot of MultiSim successfully launched on your machine. An example is below.
